

```
1 #include <iostream>
2 #include <string>
3
4 int main() {
5     // Declare variables for user input
6     std::string firstString, secondString, concatenatedString;
7
8     // Loop to take inputs 3 times
9     for (int i = 1; i <= 3; ++i) {
10         std::cout << "Iteration " << i << std::endl;
11
12         // Obtain first string input from user
13         std::cout << "Enter the first string: ";
14         std::getline([&] std::cin, [&] firstString);
15
16         // Obtain second string input from user
17         std::cout << "Enter the second string: ";
18         std::getline([&] std::cin, [&] secondString);
19
20         // Combine string one and string two, then output back to user
21         concatenatedString = firstString + " " + secondString;
22         std::cout << "Concatenated string: " << concatenatedString << "\n\n";
23     }
24
25     return 0;
26 }
```
